

TABLE OF CONTENTS

Lab number	Title	Signature
1	Dynamic Memory Allocation • Malloc • Calloc • Realloc	
2	Stack implementation using array • To implement push, pop and Peek operation	
3	Implementation of linear, Circular, and priority queue • To implement queue operations (enqueue, dequeue, peek, display) • To implement circular queue(insert, delete, and display) • To implement priority queue(Enqueue and Dequeue)	
4	Implementation of Singly Linked List and node insertion • To insert node at beginning • To insert node at the end • To insert node at specific position	
5	Implementation of doubly linked list • To insert a node at the Beginning • To insert a node at the end • To delete a node at the beginning • To delete a node at the end	
6	Implementation and analysis of sorting algorithms • Insertion Sort • Selection Sort • Shell Sort	
7	Implementation of Recursion techniques • Factorial calculation • Fibonacci Sequence • GCD of two numbers • Tower of Hanoi	
8	Implementation of Hashing Techniques • Hash Table using linear probing • Hash Table using quadratic probing • Hash Table using chaining	
9	Implementation of sequential and Binary search • To search an element in list using sequential search • To search an element in sorted list using binary search	
10	Binary Tree Traversal and Graph Representation • Inorder, preorder and postorder traversal • Graph representation using adjacency matrix
